

Fuel briquetting

About Fuel briquettes:

Fuel briquettes are compressed block of combustible biomass material such as agricultural, industrial and domestic wastes, which can be used anywhere where fire is used as a source of energy.

About the opportunity:

In the times of green revolution people are becoming aware of the need to change our fuel/energy and make it less harmful for the environment and yet cheap. Fuel briquettes not just fits the present requirement but also helps in waste management. Fuel briquettes are classified as environment friendly industry and are eligible for a number of incentives across States.

This report will be useful to anyone who is contemplating to set up fuel bricks manufacturing unit and is interested in getting real time information of set up cost, legal requirements, and break even time.

Report coverage:

1. Process of making briquettes (steps and machinery required)
2. Raw material sourcing (Type and contact details of suppliers close to your location)
3. Incentives and schemes of Government of India and state governments
4. Break-even analysis
5. Profitability (per unit)
6. Cost/capital needed (CAPEX)
